ABOUT PROJECT:

The concept of "micro-climate" comes from the fact that the main body of the building introduces greenery into the interior, forming a unique indoor climate condition and becoming a "micro-climate" full of vitality and vigor; the natural waterfront base condition also creates a more diverse sensory experience for users; the stepped-back building form welcomes more natural gifts. The natural waterfront base creates a more diverse sensory experience for users; the building form recedes step by step to welcome more natural gifts.
